Selenium WebDriver: Open Website and Validate Page

1. Steps

1. Open VS Code: Create or open a folder and create a Python file named tutorial13.py.
2. Install Selenium: Open the VS Code Terminal and run: pip install selenium
3. Check Chrome: Make sure Google Chrome is installed. Selenium Manager normally manages the required driver automatically in recent Selenium versions.
4. Enter the code: Copy the complete program shown in Section 2 into tutorial13.py and save the file.
5. Run the program: Click the Run button in VS Code, or run: python tutorial13.py.

2. Python Program

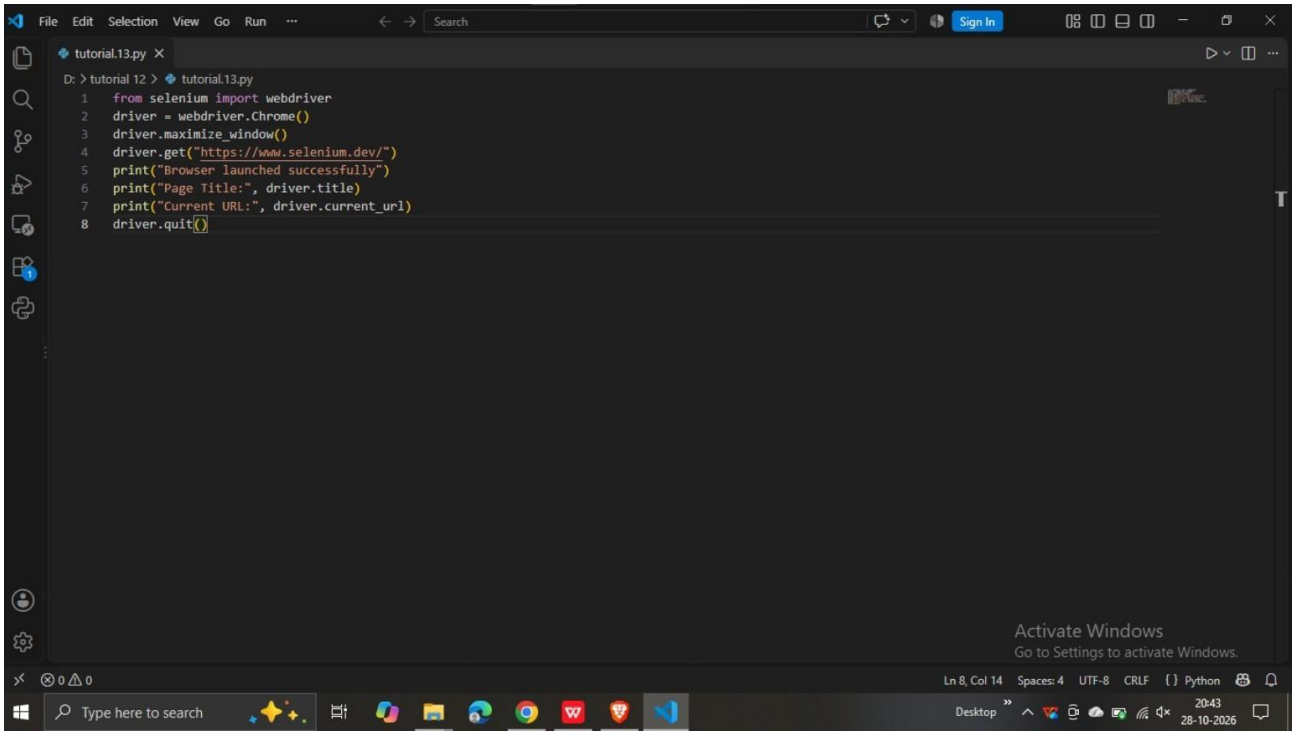

```
from selenium import webdriver

driver = webdriver.Chrome()
driver.maximize_window()
driver.get("https://www.selenium.dev/")
print("Browser launched successfully")
print("Page Title:", driver.title)
print("Current URL:", driver.current_url)
driver.quit()
```

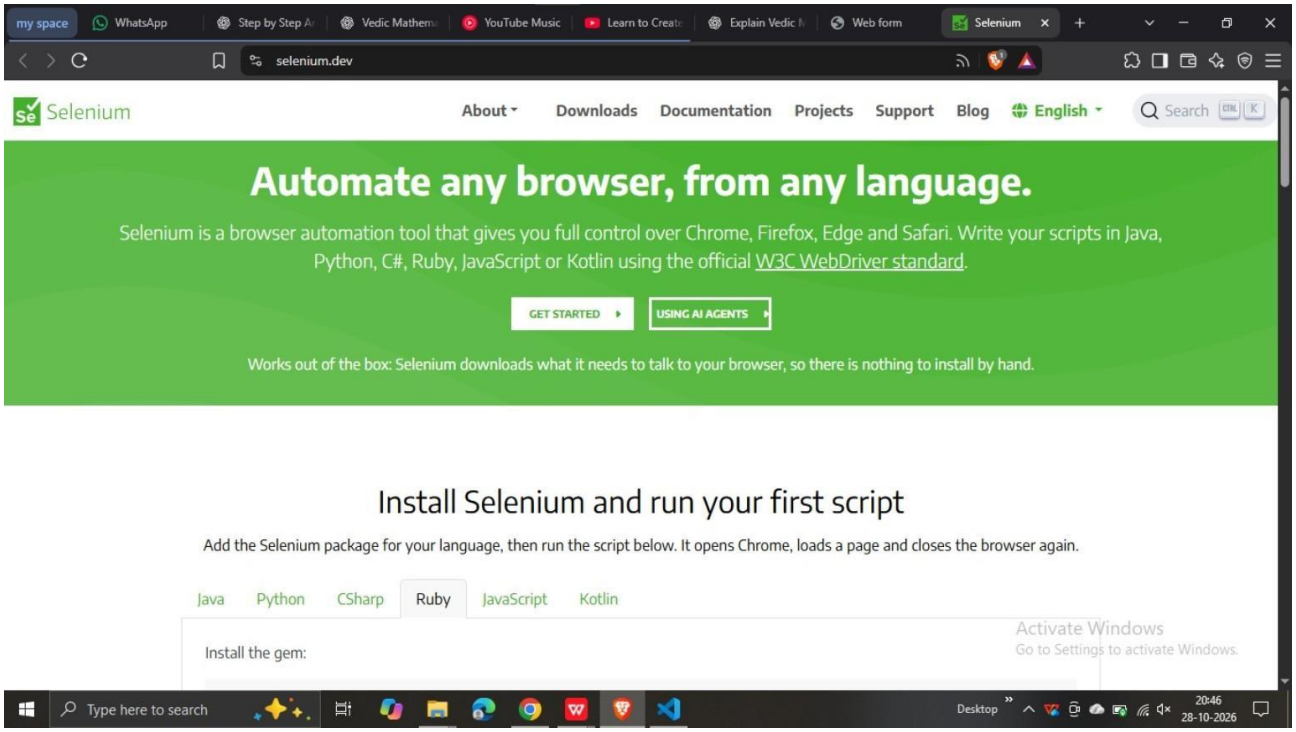

3. Explanation of the Code

- **from selenium import webdriver —** Imports Selenium's WebDriver module to control a browser.
- **webdriver.Chrome() —** Starts a Chrome browser controlled by Selenium.
- **driver.maximize_window() —** Maximizes the browser window.
- **driver.get("https://www.selenium.dev/") —** Opens the Selenium official website.
- **print("Browser launched successfully") —** Displays a message confirming that the browser launched.
- **driver.title —** Returns the title of the current webpage.
- **driver.current_url —** Returns the URL of the current webpage.
- **driver.quit() —** Closes the browser and ends the WebDriver session.

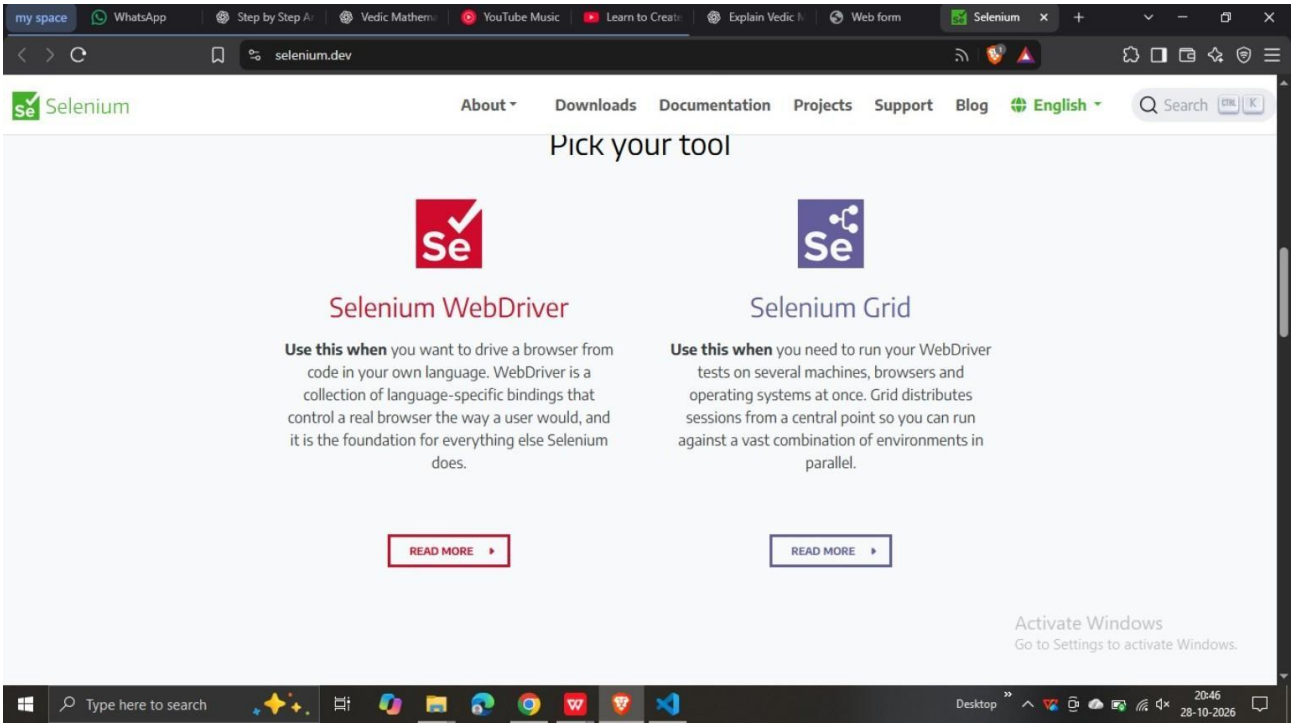

4. Screenshot

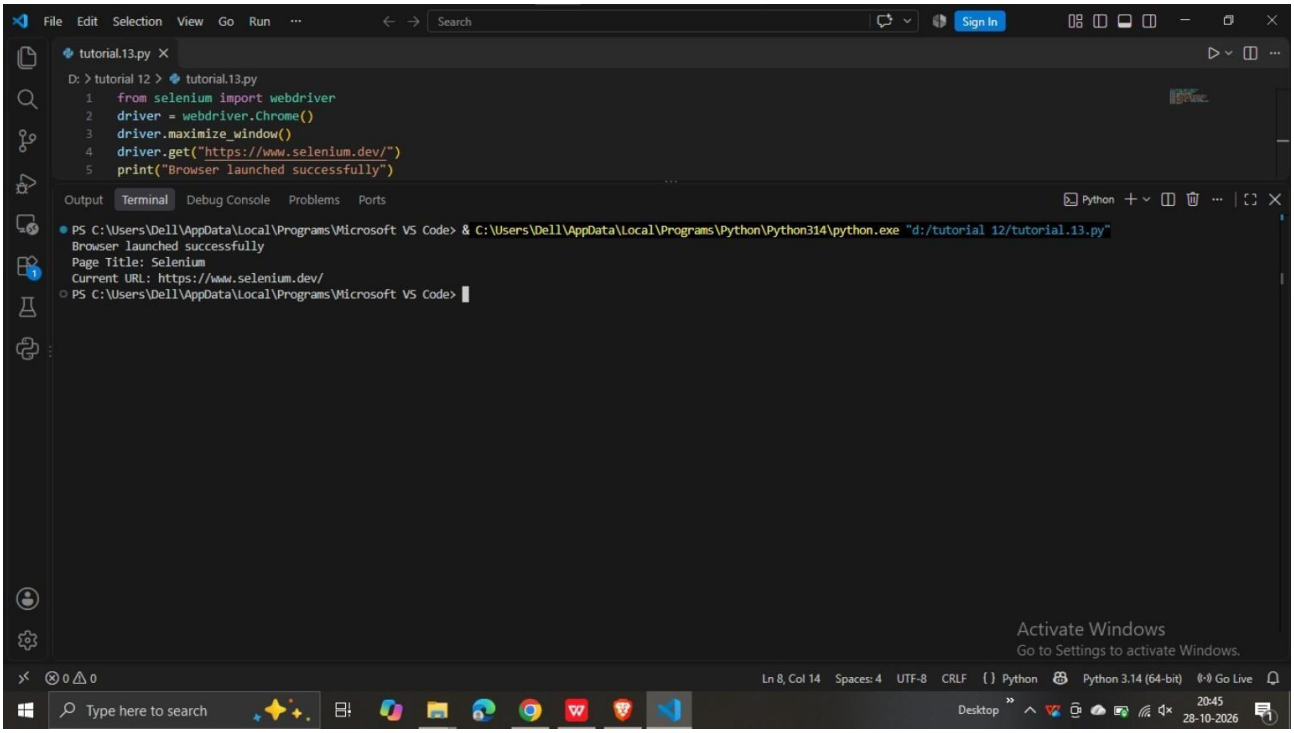

Screenshot 1: Python code in VS Code.

Screenshot 2: Selenium official website opened in the browser.

Screenshot 3: Selenium WebDriver and Selenium Grid tools page.

Screenshot 4: VS Code terminal showing successful output.

5. Expected Output

```
Browser launched successfully
Page Title: Selenium
Current URL: https://www.selenium.dev/
```

6. Result / Conclusion

The program was successfully executed using Python and Selenium WebDriver. It opened the Selenium website in Chrome, displayed the page title and current URL in the terminal, and closed the browser.
