SELENIUM WEB FORM TESTING

Functional & UI Test Report | Tutorial 7

Evidence-based report prepared from the six supplied screenshots

1. Test Overview

Module Name	Selenium Web Forms and Submission Confirmation
Test Case Group	TC-007
Tutorial	Tutorial 7
Tester Name	Not specified
Application / Pages	Selenium Web Form (selenium.dev) and TutorialsPoint Selenium Automation Practice Form
Environment	Browser screenshots supplied; browser/OS versions not provided
Objective	Review visible form controls and submission confirmation in the supplied screenshots, arranged in a logical sequence.

2. Prerequisites

- A browser is available to open the practice form pages.
- The Selenium Web Form page can be opened.
- The TutorialsPoint Selenium Automation Practice Form can be opened for its Text Box page.
- The supplied screenshots are available for visual review.

3. Test Scenarios and Results

Scenario 7a — Inspect Selenium Web Form

Test steps: 1. Open the Selenium Web Form page.
2. Identify the visible form controls.
3. Check for text/password fields, textarea, dropdowns, file input, checkbox/radio, color/date controls, range slider, and Submit.

Expected result: The Selenium Web Form and its visible controls are displayed.

Actual result / evidence: Screenshot 1 shows the Selenium Web Form page with text input, password, textarea, disabled and readonly inputs, dropdowns, file input, checkbox/radio controls, color picker, date picker, range slider, and Submit button.

Status: Observed in screenshot

Scenario 7b — Inspect TutorialsPoint Text Box form

Test steps: 1. Open the TutorialsPoint Selenium Automation Practice Form.
2. Select the Text Box section.
3. Inspect Full Name, Email, Current Address, Password, and Submit.

Expected result: The Text Box page shows the four labeled fields and Submit control.

Actual result / evidence: Screenshot 2 shows TutorialsPoint's Selenium Automation Practice Form > Text Box page with Full Name, Email, Current Address, Password, and Submit controls.

Status: Observed in screenshot

Scenario 7c — Review repeated TutorialsPoint Text Box screenshot

Test steps: 1. Compare Screenshot 3 with Screenshot 2.
2. Check whether a new page state or user action is evidenced.

Expected result: The capture is identified as repeated evidence unless a distinct state can be established.

Actual result / evidence: Screenshot 3 appears to be a repeated capture of the same TutorialsPoint Text Box page shown in Screenshot 2.

Status: Duplicate/Repeated evidence

Scenario 7d — Review Selenium Web Form controls

Test steps: 1. Review the second Selenium Web Form capture.
2. Check the visible control types and Submit button.

Expected result: The same form control groups remain visible.

Actual result / evidence: Screenshot 4 shows the Selenium Web Form again, including text/password fields, textarea, dropdowns, file input, checkbox/radio controls, color picker, date picker, range slider, and Submit button.

Status: Observed in screenshot

Scenario 7e — Review Selenium Web Form before submission

Test steps: 1. Review the form capture before the displayed submission result.
2. Note whether entered values are visible.

Expected result: The form and Submit button are visible; any unshown input action remains unverified.

Actual result / evidence: Screenshot 5 shows the Selenium Web Form with the same controls and a Submit button; no entered values are clearly visible.

Status: Observed in screenshot

Scenario 7f — Review submitted-form confirmation

Test steps: 1. Review the submission result page.
2. Verify the visible heading and confirmation message.

Expected result: The confirmation page displays 'Form submitted' and 'Received!'.

Actual result / evidence: Screenshot 6 shows a page headed 'Form submitted' with the message 'Received!' and browser developer tools visible beside the page.

Status: Observed in screenshot

4. Screenshot Evidence — Sequence

The six images are presented in the order supplied. The sequence includes two different practice sites: the Selenium Web Form page and the TutorialsPoint Text Box page. Screenshots 2 and 3 appear to be repeated captures. The final image shows a submission confirmation. These screenshots show visible UI states only; they do not prove a single continuous end-to-end run or establish which form produced the confirmation.

Step 1 — Inspect Selenium Web Form

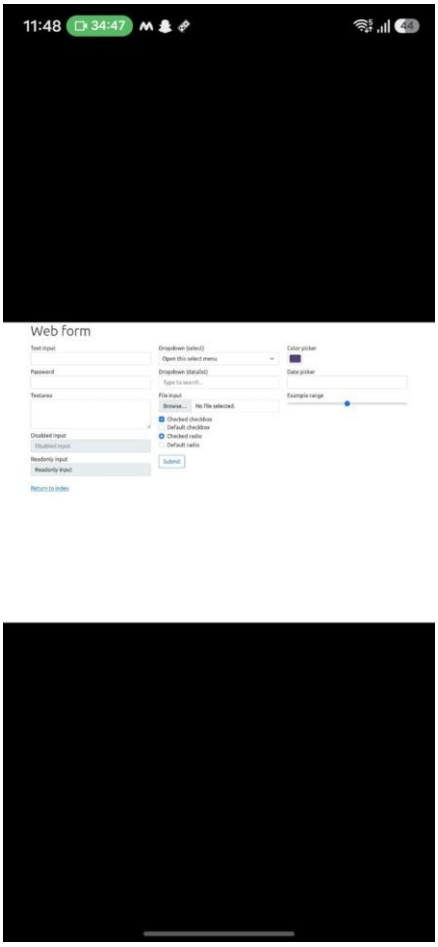

Figure 7.1: Inspect Selenium Web Form.

Step 2 — Inspect TutorialsPoint Text Box form

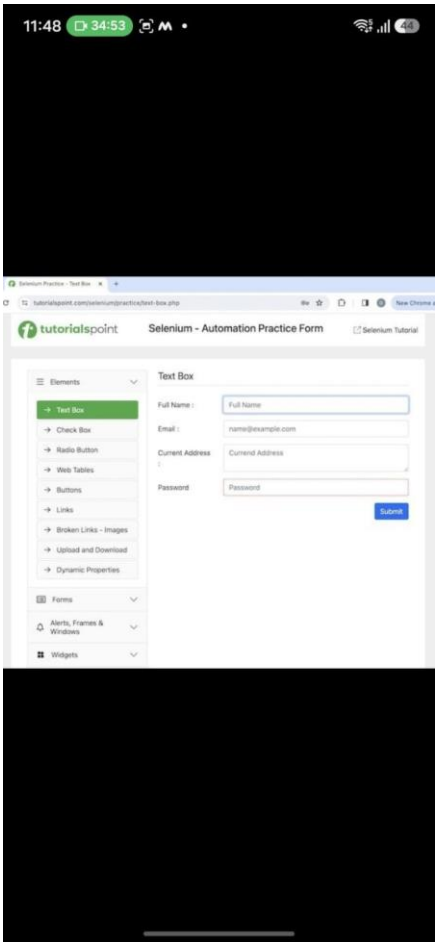

Figure 7.2: Inspect TutorialsPoint Text Box form.

Step 3 — Review repeated TutorialsPoint Text Box screenshot

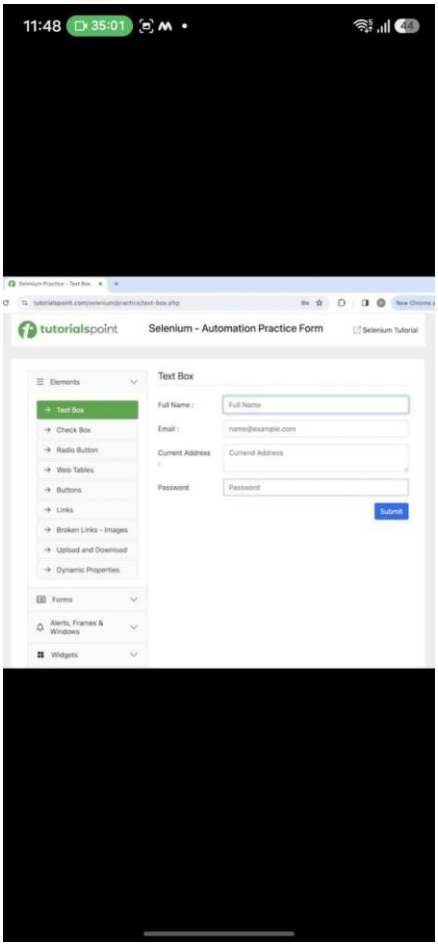

Figure 7.3: Review repeated TutorialsPoint Text Box screenshot.

Step 4 — Review Selenium Web Form controls

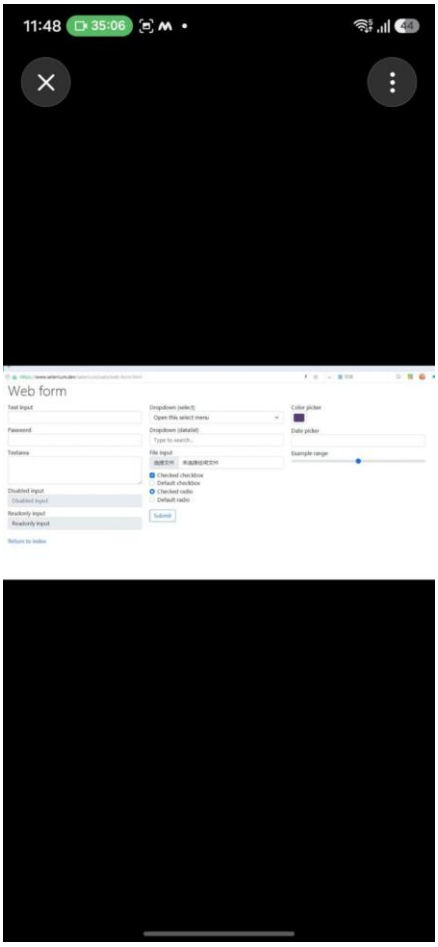

Figure 7.4: Review Selenium Web Form controls.

Step 5 — Review Selenium Web Form before submission

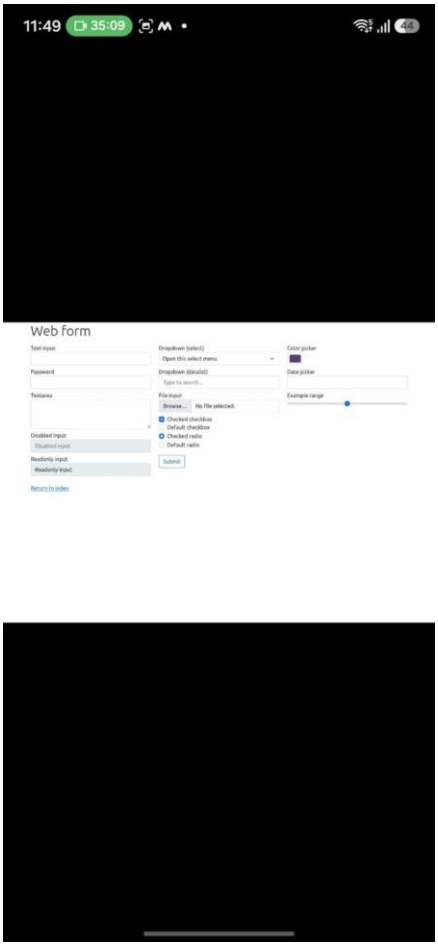

Figure 7.5: Review Selenium Web Form before submission.

Step 6 — Review submitted-form confirmation

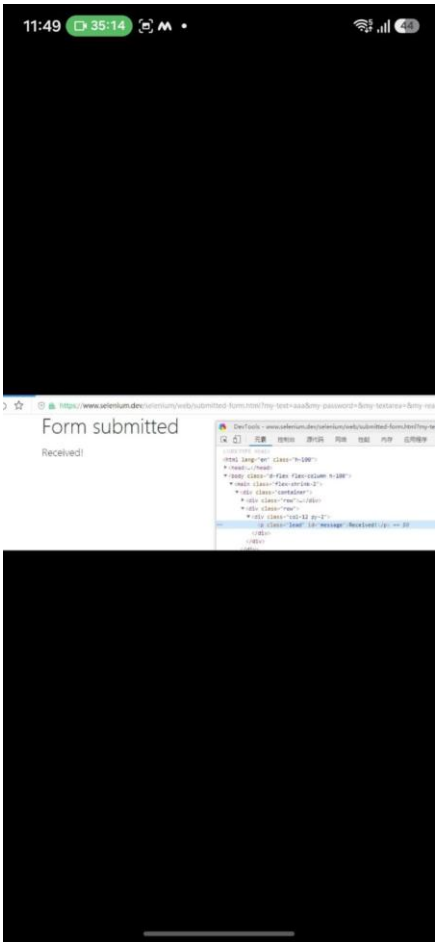

Figure 7.6: Review submitted-form confirmation.

5. Summary of Test Results

Metric	Count	Notes
Scenarios documented	6	Form inspection, second practice site, repeated capture, and submission confirmation
Screenshots reviewed	6	All six supplied images placed in the report in supplied order
Confirmed failures	0	No explicit failure message is shown in the supplied screenshots
Requires independent verification	3	Input/submit actions, relationship between pages, and form/backend behavior are not established by screenshots alone

6. Conclusion and Recommendations

The supplied screenshots show the Selenium Web Form controls, a TutorialsPoint Text Box form, repeated captures, and a final page displaying “Form submitted” and “Received!”. The images provide visual evidence of these displayed states. They do not establish that all images belong to one continuous test run, that every control was exercised, or that the final confirmation resulted from a specific form shown earlier.

Recommendation: execute one clearly recorded test run on a single chosen practice site. Enter valid test data, exercise the relevant controls, submit the form, and capture the before/after states. Record the browser and OS, and verify expected validation or confirmation behavior.

7. Bug Reports

No confirmed UI defect is identifiable from the supplied screenshots. Control validation, file upload behavior, dropdown choices, date/color/range interactions, and the exact submission flow were not demonstrated sufficiently to classify as passed or failed.
